

## Integrating national SDG, NDC, and LTS processes with enhanced research capacity

Prof. Nate Hultman  
Director, Center for Global Sustainability  
University of Maryland School of Public Policy

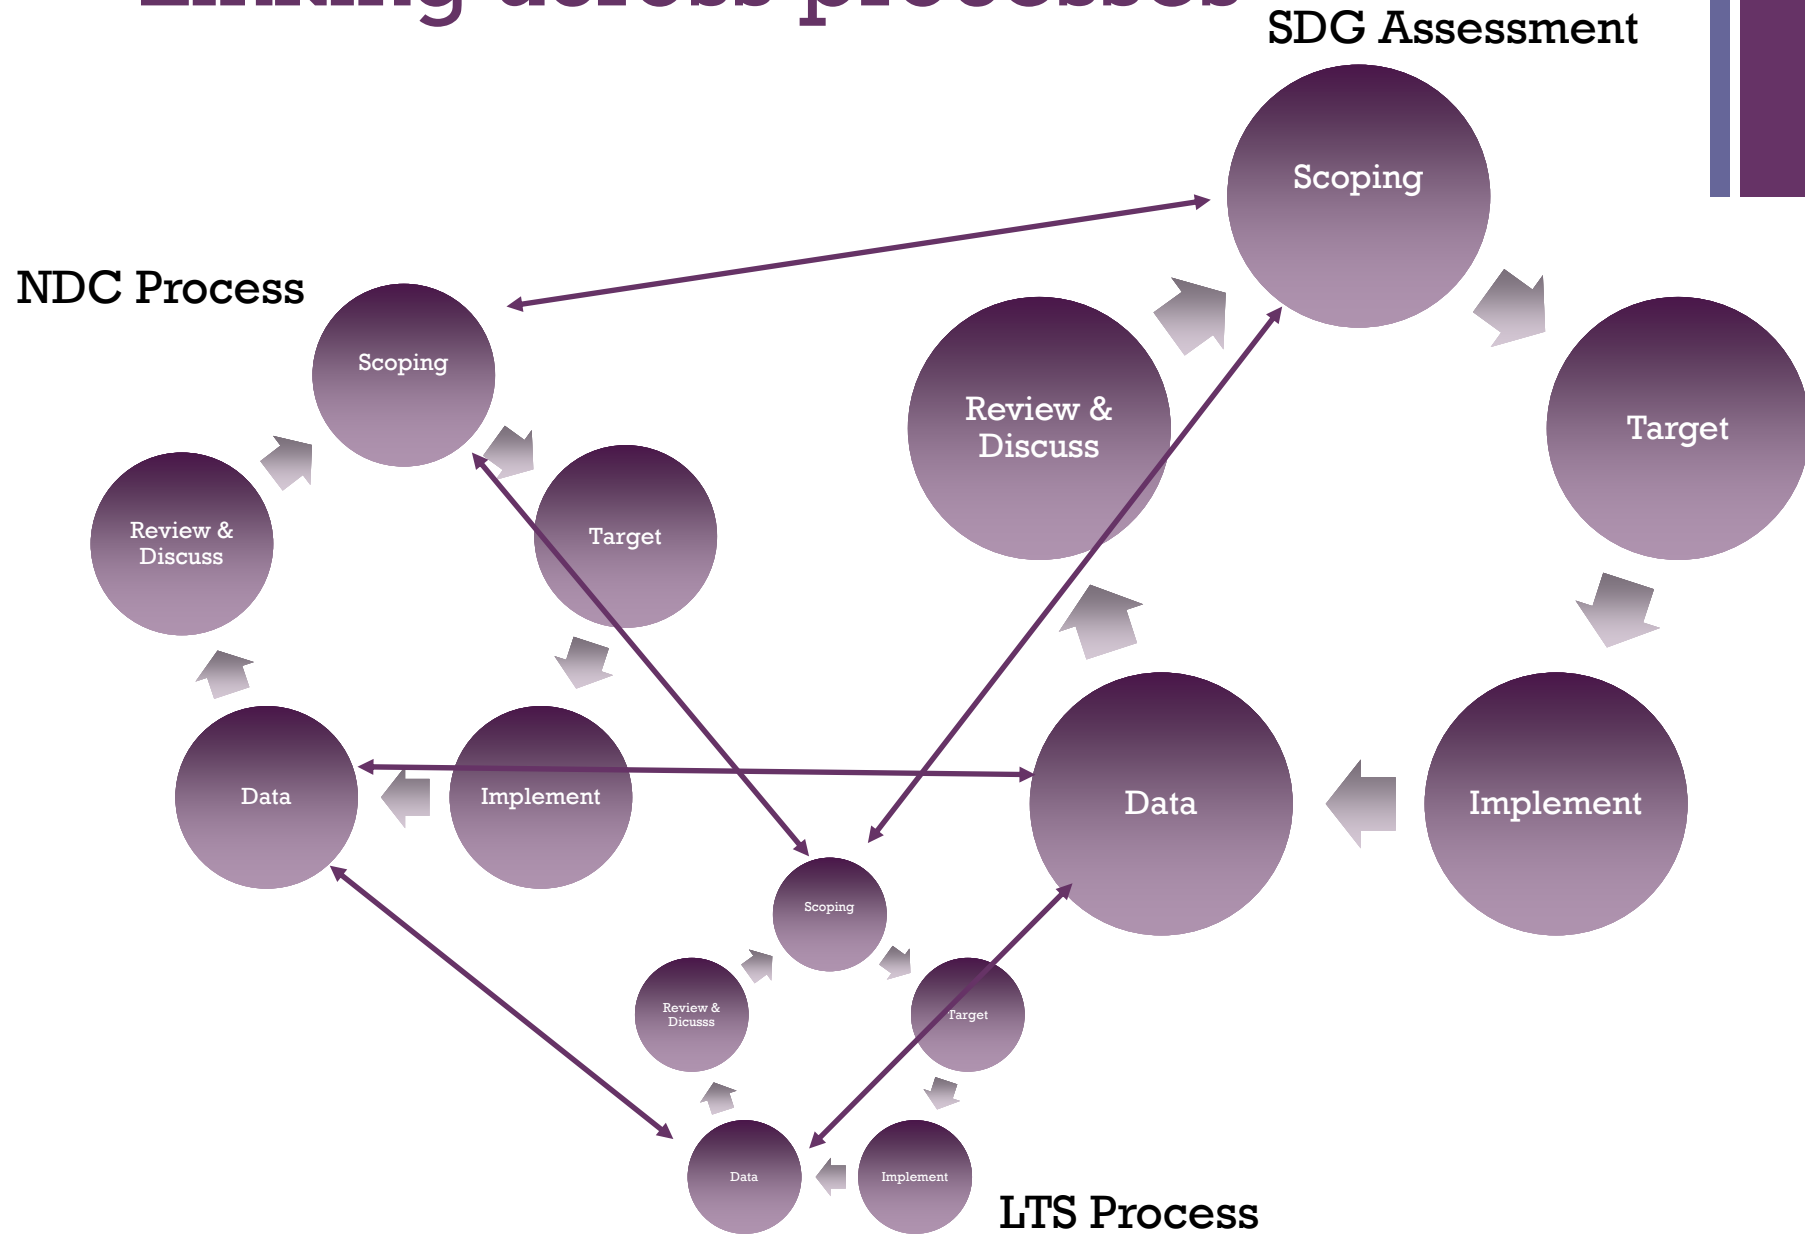

Kiribati

# + Engine of Ambition

# + Linking across processes

# + Linking the Policy and Analytical Processes

1. Future sustainable development pathways can be co-produced by policy makers, analysts, and other stakeholders
2. These conversations generate goals for near-term targets, long-term strategies, and sustainable development
3. Analysis conducted by research groups with global expertise can be conducted in partnership with universities or other research capacity within country

**TWI 2050 Project Can Support this Process by providing robust analysis, leveraging broader coalitions of research, and integrating this with multiple dimensions of NDC, LTS, and SDGs**
